### DETAILED ACTION

1. Applicant's arguments filed 08/23/2004 have been fully considered but they are not persuasive.

In the remarks the applicant argued in substance:

(A) In page 4, paragraph 7, applicant asserts that Leopold does not teach "utilizing a complementary channel arrangement for the two satellites which facilitate full dual pole coverage continuity when one of the satellites fails".

In response to argument (A), the examiner pointed on columns 1, lines 24-42 examples of co-positioning or co-located satellites used in previous art. However, applicant can find on column 3, lines 50-53 where the "present invention are achieved by co-locating multiple geosynchronous satellites along a common ground path...". Where it is shown in the previous art that the invention utilizes co-located satellites to as a means to maintain uninterrupted system communication. Moreover, as further explanation column 6, lines 48-54 and column 10, lines 9-13 and 28-39; show the means to "facilitate full dual pole coverage continuity when one of the satellites fails". E.g., "duplex device" and "satellites located in orbits... to follow a near identical ground path" ensure a "full dual pole coverage" after handoff. Also, "make-before-break handoff" ensures continuity of coverage. The previous art presents a handoff procedure. It is well known in the art, that handoff can be applied when one of the satellites fails.

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claim 1 is rejected under 35 U.S.C. 102(e) as being anticipated by Leopold (Leopold et al.; US Patent No.: 6226,493 B1).

Regarding claim 1, Leopold teaches of a method of providing hot back-up for a satellite communication satellite system comprising collocating two satellites (column 1, lines 34-42 and column 3, lines 50-53); and utilizing a complementary channel arrangement for the two satellites which facilitates full dual pole coverage continuity when one of the satellites fails (columns 11 and 12, lines 50-67 and 1-33, respectively).

***Conclusion***

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
